Professional Summary

Full Stack Software Engineer with a strong focus on solution architecture and technical leadership. Specialist in the TypeScript ecosystem (Next.js, Node.js) and secure data modeling (PostgreSQL, RLS/RBAC). My path has evolved from full-stack execution to strategic architectural decision-making, applying Clean Architecture and DDD in building scalable SaaS and ERPs. I operate at the intersection of engineering and business, guiding teams, managing technical debt, and orchestrating the complete product lifecycle, from roadmap planning with leadership to web deployment.

Highlights

- **Recognition in Architecture (1st Place):** Winner of the Shark TADS evaluation panel with the ContaUp project, awarded as the best-structured solution in terms of infrastructure, code organization, and software architecture among all evaluated teams.
- **Early Technical Leadership:** Assumed technical responsibility for company projects, actively guiding the development team in strategic architectural decisions and ensuring the rigorous application of best practices.
- **Software Engineering Mentorship:** Technical guidance for a class of 12 students at the Catholic University of Brasília (UCB), leading the development of practical projects and preparing new talent with real-world market standards.

Technologies

JavaScript, TypeScript, SQL, PL/pgSQL, Programming Logic, Object-Oriented Programming (OOP). React.js, Next.js (App Router), Tailwind CSS, Shadcn/ui, GSAP (Animations), HTML5, CSS3, SPA/SSR/Hybrid Rendering. Node.js, Supabase, PostgreSQL, REST APIs, WebSockets, Data Modeling, RBAC, Row Level Security (RLS), Stripe API. Git/GitHub Flow, Docker (notions), Clean Architecture, SOLID, DDD (Tactical Patterns), Agile Methodologies, Figma, Technical Documentation.

Professional Experience

V-ONE

Jr. Fullstack Software Eng.

May 2026 – Present | Remote, Brazil

- **Leadership and Strategy:** Worked with leadership to define the product roadmap, managing the engineering team in agile cycles to ensure continuous delivery.
- **Software Architecture:** Development of ERPs and complex platforms, including architectures for VPS management systems, using Next.js, Node.js, and TypeScript under Clean Architecture and SOLID principles.
- **Quality and Standardization:** Structuring functional tests with Vitest, resolving critical technical debt, and creating technical API documentation to standardize processes and accelerate team onboarding.

Eximia Tech

Full Stack Software Engineer

Jun 2025 – Present | Remote, Brazil

- **SaaS Development:** End-to-end engineering of *Agendai* (multi-tenant SaaS) with Next.js in hybrid rendering, delivering financial dashboards with a focus on high performance (SEO).
- **Data Security:** Modeling and structuring infrastructure on Supabase/PostgreSQL applying DDD tactical patterns, with absolute client isolation guaranteed via RLS and RBAC policies.
- **Critical Integrations:** Implementation of WebSockets for real-time state updates, Google Maps API, and payment/subscription flows via Stripe API.

Freelance Full Stack Developer

May 2024 – Jun 2025 | Remote, Brazil

- **End-to-End Management:** Conducted the complete lifecycle of applications for local clients (from requirements gathering and infrastructure setup to production deployment).
- **ERP Development:** Creation of a Condominium Management system with over 24 responsive interfaces, ensuring multi-tenant data protection (RLS/RBAC in PostgreSQL).
- **Conversion and Payments:** Building landing pages focused on Web Vitals using GSAP for fluid animations and implementing transparent checkouts with Stripe API.
